

NSM Remote Control - Full Version

This Infra-Red (IR) remote control is a brand new, aftermarket replacement to suit all NSM ES4, ES5 and ES5.1 Jukeboxes.

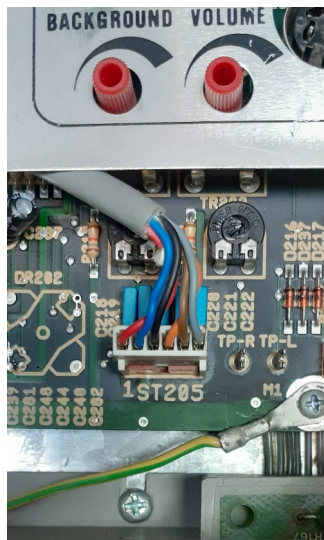

Unlike the Basic version, the Full version allows you to control volume levels independently as well as together. Background and Free Credit functions have also been added, making this remote functionally identical to the original OEM remote control.

The Background and Free Credit features must be enabled on your jukebox for these buttons to operate. Refer to your jukebox manual for more information.

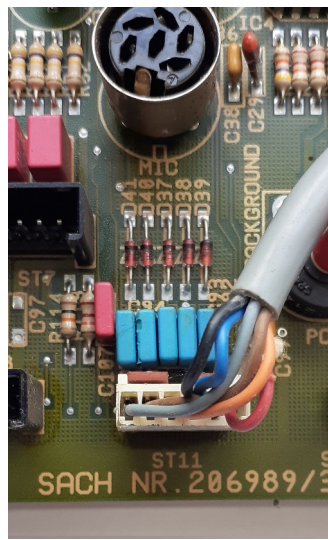

For the remote control to operate, a receiver module must be connected to the central unit as shown below.

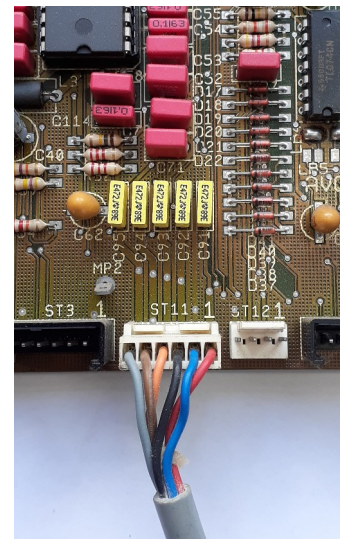

ES4 Receiver
(The same receiver is used for ES4 – ES5.1)

ES4
Receiver Connection

ES5
Receiver Connection

ES5.1
Receiver Connection

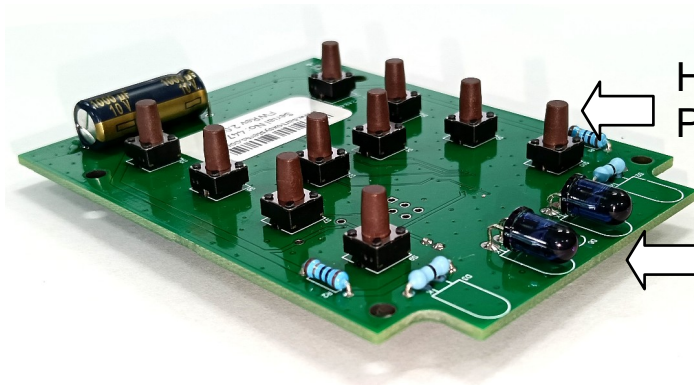

Aftermarket receiver is available

Refer to your Jukebox manual for more information.
